Faster Logins. Smarter Routing. Happier Students.

How TCS Education System simplified app delivery with Edgenexus.

> *Having these sites accessible with low response time on their browser speaks favorable about our institutions.*

Les Waite, associate director of system operations, TCS Education System

The Challenge

TCS Education System needed a smarter way to support multiple affiliate institutions across North America.

Their goal was to modernize and streamline digital access for staff and students, without spending weeks in setup or training.

The Solution

After evaluating options, TCS deployed the Edgenexus EdgeADC, configured to manage application delivery across all schools with ease.

With intuitive traffic control through flightPATH, TCS could direct users to the right systems based on hostname, all through a single VIP.

The Results

A centralized, high-performance load balancing environment supporting multiple schools, without overloading the IT team.

- Consolidated app delivery for four institutions under one platform
- Simple rule creation with flightPATH—no coding needed

Why Edgenexus

Why They Chose Us:
- Manage and monitor without scripting or complexity
- flightPATH™ built-in,Point-and-click traffic logic that anyone can use
- Fast install and configuration across campuses

Favourite Feature

"Edgenexus gave us exactly what we needed, a simple, powerful, and cost-effective way to manage load balancing across multiple schools"

TCS loved the simplicity and control of building traffic rules without writing a line of code.
