

Effortless Load Balancing

A leading Islamic Microfinance Bank in Yemen needed a load balancing solution for their Temenos Transact core banking system that wouldn't drain time, money, or patience.

Our team didn't have time for complex installs or training. Edgenexus just worked—and worked brilliantly.

Head of IT,
Yemeni Islamic Microfinance Bank

The Challenge

The bank set out to deliver 24/7 banking across 100+ branches with secure, multi-domain access through a single public VIP, while keeping costs low and setup simple enough for their in-house team. They had no time for overcomplicated enterprise solutions or so-called “free” tools that lacked support and accountability.

The Solution

Deployment completed in just two days with an Active-Passive virtual appliance setup. A single VIP routed traffic via flightPATH rules based on hostname logic and other built-in security controls. Persistence rules and smart server monitoring enabled fast, reliable access across multiple portals.

The Results

No training, no manuals, just hands-on guidance from Edgenexus support.

flightPATH blew their minds with drag-and-drop traffic management. No code, no headaches.

Powerful enterprise features without the price tag or red tape.

Why Edgenexus

Why They Chose Us:

- Simplicity: Configure, deploy, and maintain without breaking a sweat.
- Power: Enterprise-grade features like flightPATH, GSLB, WAF, and Kubernetes support.
- Value: All the flexibility, none of the bloat.

Favourite Feature

flightPATH: Point, click, route traffic. No scripts. No consultants. Just results.

Support: Hands-on guidance and top-tier technical help whenever it was needed.
